PrecisionHealth

EXECUTIVE ASSESSMENT PROGRAM

Get a clear picture of your current health and your future risks.

PrecisionHealth

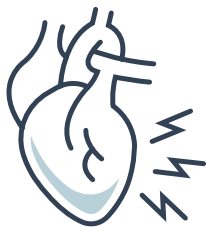

EXECUTIVE ASSESSMENT PROGRAM

Experience the future of healthcare. For the first time, the tools are available today.

Combining state-of-the-art imaging, molecular biomarker testing and more, the PrecisionHealth Executive Assessment Program provides a new level of insight—beyond that of a traditional executive assessment.

Our priority is to **prevent and early detect disease** while assisting you to reach your highest health potential. The overall goal is to **increase your healthspan and delay the onset of disease** with a particular focus on:

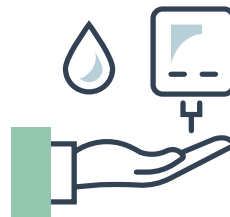

CARDIAC DISEASE

CANCER DETECTION

METABOLIC HEALTH

NEURODEGENERATIVE DISEASE

MRI SCREENING

We have partnered to provide you with **the most advanced MRI screening** currently available. You receive the best assessment and screening, **without any risk from radiation**. This allows for detection of early stage abnormalities, **when they are most amenable to treatment**.

BIOMARKERS

We analyze the most diverse range of blood biomarkers to show **your health risks today and what you can do about it**. Your health is more than your genetics. Our preventive health assessments **analyze your metabolites, proteins, nutrients and toxins to give you a full picture of current starting point**.

OPPORTUNITY

Be the architect of your health trajectory by taking a deep dive into your current health and assessing your risks with next generation technologies. We offer **personalized** and **actionable health insights** that **empower you** to be proactive in your health.

RATIONALE

The majority of age-related diseases do not present with obvious symptoms and can remain undetected with current conventional testing for years. Detect these diseases **before symptoms occur** so you have a head-start on potentially reversing the progression of disease.

HOW IT WORKS

The PrecisionHealth Executive Assessment Program offers a **next generation** model of health assessment: **personalized, predictive, preventative** and **proactive**.

It is a **comprehensive strategic health roadmap** to help you **achieve your short- and long-term health goals** by identifying your specific risk factors through **baseline testing, advanced molecular biomarker testing, micronutrient analysis** and **diagnostic imaging**.

REPORT

We carefully integrate **your results** to assemble **your PrecisionHealth Report** to focus on disease detection including cancer, cardiac disease, metabolic disorders and neurodegenerative conditions.

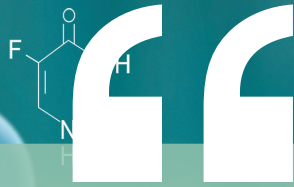

You will also learn about genetic predispositions, health risks, potential drug reactions; as well as **recommendations** around nutrition, exercise and supplements **that are specific to you**.

INITIAL ASSESSMENT - \$7,850.00 + GST

Price includes:

- MRI Cancer Screen
- Advanced Cardiac markers
- Baseline labs
- Micronutrients
- Molecular Biomarkers
- Advanced Hormones
- Body Composition (DXA)
- Physical Exam
- Precision Health Report

The PrecisionHealth Executive Assessment Program offers a next generation assessment package that uses cutting edge technologies to provide the most comprehensive medical assessment available.

ADD-ON MENU

- Coronary calcium score
- Carotid Ultrasound Screen
- Stool Microbiome
- Longevity Markers
- Pharmacogenomics

CONTINUE THE JOURNEY

- Work with us year-round in the StrategicHealth Program
- Deep dive precision health annual program
- Optimize Performance, Healthspan + Longevity
